

Morimoto Mfg Co., Ltd. (KANSAI SPECIAL) at JIAM 2002 OSAKA Booth No. 5-B001

Morimoto Mfg Co., Ltd. (President: Yoshihide Morimoto; URL: www.kansai-special.com) "KANSAI SPECIAL" is planning to exhibit a wide range of models suitable for sewing according to the characteristics of each fabric, such as denim and knit, for each theme, including the following models:

SQ7803LR-PHB-AP/CS4/DD/PT

The SQ7803LR series is a three needle square type of feed-off-the-arm, double chain stitch machine, which is ideal for lap seaming or side seam on heavy duty such as Jeans and working pants. The

newly developed PHB-AP series to be exhibited this time uses KANSAI SPECIAL's original belt puller to increase the contact area between the puller and the fabric, thereby increasing the feed force. The new mechanism makes it easier to get over the lap seam, making it possible to feed the material smoothly. Furthermore, the presser pressure and puller pressure are air controlled by the scale of the regulator to maintain stable pressure. It has been well received popular function, left & right differential feed bar mechanism help to reduce sewing slippage. The original lubrication system is equipped with a large oil tank, filter, and pump for automatic lubrication, which enables the sewing machine to run at a high speed. Equipped with an oil volume adjustment system, the oil leakage countermeasure is also perfect. The belt cover between the upper and lower shafts is designed so that it does not put pressure on the fabric. The fabric can be handled well, and the work efficiency is also improved.

SQ7803LR-DG-PHB-AP/CS4/DD/PT

The "-DG" model, which will also be exhibited at the exhibition, is equipped with a patented independent needle guard mechanism in Japan. Which is three needle square type of feed-off-the-arm, double chain stitch machine.

With conventional sewing machines, every time the specifications

of the product were changed, it was necessary to change the feed amount of the fabric to match the specifications and to readjust the needle guard. The independent

needle guard mechanism eliminates this wasteful and troublesome work, and greatly increases work efficiency.
WFB5509PA-3WAC

KANSAI SPECIAL's double chain stitch, feed

sewing machine, the flagship model of the FBX series, is suitable for sewing thick waistbands such as denim and work clothes. The WFB series uses KANSAI SPECIAL's unique

technology to achieve a 1/8" gauge, and the WFB5509 supports various gauge widths by changing the needle position. The WFB5509PA-3WAC to be exhibited this time is equipped with an automatic skip stitch device and cutting function by electric control, and it is possible to easily skip stitches and change the cutting position by operating the LCD touch panel, so it can be used widely. By performing work that was divided into multiple processes at once, work efficiency is greatly improved. In addition, by installing a new 850W motor, it is possible to sew more powerfully than before. Furthermore, a new type of table was adopted to provide an environment where operators can work easily.

NB1033PSSM-MD2 / FX4412PTV/DD

A multi-needle double chain stitch machine that is pronoun with KANSAI SPECIAL.

Among them, the "NB1033PSSM" model is specialized for smocking and shirring. By changing the type of cam, it is possible to create a wide variety of patterns, and it is a model that can respond to a wide range of originality. The FX4412PTV is a pin-tucking model. Taking advantage of the multi-needle feature, it can efficiently and beautifully sew multiple pin-tucking at one time, such as for decorative stitching on women's shirts.
